

D3 MailWorks Email Services is designed for businesses seeking better control and flexibility over email services without the expense of creating an Exchange environment. D3 MailWorks provides highly functional features such as collaboration, Outlook synchronization, remote administration, advanced web mail and web administration, and database connectivity - giving you the power and control required to have your business operate at the highest levels of reliability, connectivity and speed.

D3 MailWorks offers a fully featured Outlook integration component for mail, calendaring, contacts, and collaboration. D3 MailWorks provides complete integration between the D3 MailWorks server and Microsoft's Outlook email and office productivity client.

Supporting all the rich features offered in Outlook, including appointment scheduling, free and busy status, public folders, and access to shared account resources, D3 MailWorks offers businesses all the power they need for efficient coordination and communication.

Communication is the key to the success of any team, and D3 MailWorks integrates with Microsoft's proven Outlook office productivity tool to give you an advantage in one of the most critical aspects of conducting successful business. There is no excuse for miscommunication.

Features include:

Enhanced Web Mail

Web mail is an email service that uses a web browser to allow viewing, sending, receiving, editing & deleting of email, just as you would with standard email clients such as Outlook or Eudora.

Web mail is ideal for mobile users because it allows you to access your email from anywhere, anytime with any computer connected to the Internet.

Features of the Web Mail interface includes a personal web calendar, customizable filters, global contacts, public folders, quota usage display, import contacts from Outlook/Outlook Express, multilingual capacity, read and create HTML emails and much more.

Calendaring, Contacts and Tasks

Sending and receiving e-mail is only half what you need... Today's businesses rely on features such as personal calendaring, contact management, and task tracking; but it's not enough to have this available only from your desktop computer. D3 MailWorks synchronizes your Calendar, Contacts and Task Lists to your Web Mail so you can access all the important features you need everyday... everywhere.

Changes made in both Outlook and the Web Mail client are communicated in real time, so you can always be sure you have the most up to date data at your fingertips. You can schedule an appointment using Outlook when you are at work, add a "to do" item to your task list, and update the mobile phone number of a contact. Then when you are away from your desk, you can still get access to your information from the Web Mail client, with all the latest updates made at your work desk. And, of course, likewise in reverse - if you get a phone call while you are away from your office, and you need to reschedule that appointment, you can use Web Mail to make the change, and when you get back to your desk, it will be updated, and you won't miss anything.

D3 MailWorks E-Mail Services

Outlook Synchronization

Add appointments, tasks or contacts in either web mail or Outlook and D3 MailWorks will automatically synchronize these items.

My Files

D3 MailWorks is the first to include the exclusive "My Files" feature - server hosted file storage for each email account. You can select images, audio, video and office files to be shared with others and load this information easily into your "My Files" space. The files are then uploaded to the web server and you can deliver URLs to clients and colleagues to view the items on their own unique URL.

Web Administration

Easy-to-Use web administration tool to monitor usage, create and change email addresses and monitor statistics. For ease of access, the administration program is capable of managing server groups and can be run on remote workstations to manage enterprise clusters.

Anti-spam

D3 MailWorks provides Bayesian Filtering support , guards your mailbox from junk mail. You can auto-train the filter with both valid and spam emails to greatly improve the effectiveness of correctly identifying junk mail. SPF, URL blacklisting, greylisting, outbound whitelisting and a host of other anti-spam features are also included to keep your inbox spam-free.

Security

Authentication methods such as APOP and SMTP Authentication, CRAM MD5, Secure Password Authentication (NTLM support) and advanced relay settings control user access to your mail server. Secure Sockets Layer (SSL) support for SMTP, POP and IMAP protocols allows mail clients to connect to the server securely by ensuring that mail communications between the mail client and D3 MailWorks are encrypted.

Message filtering

D3 MailWorks message filtering allows you to define rules and actions for messages as they pass through D3 MailWorks. For example, you can configure filters to append text to messages, quarantine messages, move or delete messages based on content. Filters can be configured at a mailbox and server level. Scripted filtering provides a highly configurable and powerful filtering engine.

Integrated spell checking

Web mail supports spell checking in multiple languages.
